Overview of hadronic decays of the charmed hadrons

Friday, July 21, 2023 11:00 AM (45 minutes)

For charmed mesons, this presentation will report the recent amplitude analyses of Cabibbo-favored and -suppressed D_s decays by BESIII, including the observation of a new a_0 -like state at 1.817 GeV, the branching fraction measurements of D meson doubly Cabibbo-suppressed decay and decays involving K_L^0 . In addition, LHCb recently performed many measurements of CP violation/asymmetry and searched for rare/forbidden decays of charmed mesons. Belle also introduced a new D_0 flavor tag method.

For charmed baryons, this presentation will report the partial wave analysis of $\Lambda_{c^+} \rightarrow \Lambda \pi^+$ and the observations of Cabibbo-suppressed decays Λ_{c^+} decays by BESIII, observation of new Ω_c/Ξ_c decays by LHCb, and observation of $\Lambda \pi$ signals in the $\Lambda_{c^+} \rightarrow \Lambda \pi^+$ decay by Belle.

Consent

I consent to recording/broadcasting my presentation.
