- Entanglement can be useful in information processing.
- In metrology, useful entanglement has been well-studied via linear (local) Hamiltonians.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

- A central task is to prove *quantum advantages*.
- Entanglement can be useful in information processing.
- In metrology, useful entanglement has been well-studied via linear (local) Hamiltonians.

#### Our goal

1. Characterize useful entanglement via nonlinear Hamiltonians.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

2. Compare linear and nonlinear useful Hamiltonians.

### Multipartite entanglement

An N-partite state is fully separable if

$$\varrho_{\mathrm{sep}} = \sum_{k} p_{k} |\phi_{k}^{(1)}\rangle \langle \phi_{k}^{(1)}| \otimes \cdots \otimes |\phi_{k}^{(N)}\rangle \langle \phi_{k}^{(N)}|.$$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

Otherwise, it is multipartite entangled.

#### Multipartite entanglement

An N-partite state is fully separable if

$$\varrho_{\mathrm{sep}} = \sum_{k} p_{k} |\phi_{k}^{(1)}\rangle \langle \phi_{k}^{(1)}| \otimes \cdots \otimes |\phi_{k}^{(N)}\rangle \langle \phi_{k}^{(N)}|.$$

Otherwise, it is multipartite entangled.

#### **Examples of four qubits**

GHZ state:  $|\text{GHZ}\rangle = |0000\rangle + |1111\rangle$ W state:  $|W\rangle = |0001\rangle + |0010\rangle + |0100\rangle + |1000\rangle$ Cluster state:  $|\text{CL}\rangle = |0000\rangle + |1100\rangle + |0011\rangle - |1111\rangle$ Singlet state:  $|S_4\rangle = |0011\rangle + |1100\rangle - \frac{1}{2}(|10\rangle + |10\rangle) \otimes (|10\rangle + |10\rangle)$ Biseparable state:  $|\psi^+\rangle \otimes |\psi^+\rangle$  with  $|\psi^+\rangle = \frac{1}{\sqrt{2}}(|00\rangle + |11\rangle)$ 

#### The situation

An input state  $\rho$  is transformed by the unitary dynamics

$$\varrho \to \varrho_{\theta} = e^{-i\theta H} \varrho e^{+i\theta H}$$

How fast does  $\rho$  evolve under the unitary generated by a given *H*?

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

#### The situation

An input state  $\rho$  is transformed by the unitary dynamics

$$\varrho \to \varrho_{\theta} = e^{-i\theta H} \varrho e^{+i\theta H}$$

How fast does  $\rho$  evolve under the unitary generated by a given *H*?

#### **Quantum Fisher information**

$$F_{Q}(\varrho, H) = 2\sum_{k,l} \frac{(\lambda_{k} - \lambda_{l})^{2}}{\lambda_{k} + \lambda_{l}} |\langle k|H|l \rangle|^{2}, \quad \varrho = \sum_{k} \lambda_{k} |k \rangle \langle k|.$$

This is related to metrological sensitivity via Cramér-Rao bound.

# Metrological usefulness

An state is called metrologically useful if and only if

$$F_Q(\varrho, H) > \max_{\varrho_{sep}} F_Q(\varrho_{sep}, H).$$

Pezzé and Smerzi, PRL 2009

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

### Metrological usefulness

An state is called metrologically useful if and only if

$$F_Q(\varrho, H) > \max_{\varrho_{\mathrm{sep}}} F_Q(\varrho_{\mathrm{sep}}, H).$$

Pezzé and Smerzi, PRL 2009

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

A Hamiltonian is called metrologically useful if and only if

$$s(H) \equiv rac{\max_{\varrho} F_Q(\varrho, H)}{\max_{\varrho_{\mathrm{sep}}} F_Q(\varrho_{\mathrm{sep}}, H)} > 1.$$

SI, Smerzi, and Pezzé, arXiv:2405.15703, 2024

### Metrological usefulness

An state is called metrologically useful if and only if

$$F_Q(\varrho, H) > \max_{\varrho_{\mathrm{sep}}} F_Q(\varrho_{\mathrm{sep}}, H).$$

Pezzé and Smerzi, PRL 2009

A Hamiltonian is called metrologically useful if and only if

$$s(H)\equiv rac{\max_{arrho} F_Q(arrho,H)}{\max_{arrho_{ ext{sep}}} F_Q(arrho_{ ext{sep}},H)}>1.$$

SI, Smerzi, and Pezzé, arXiv:2405.15703, 2024

• If  $s(H_1) > s(H_2)$ , then  $H_1$  is more useful than  $H_2$ .

### Several facts

$$s(H) = rac{\max_{arrho} F_Q(arrho, H)}{\max_{arrho_{ ext{sep}}} F_Q(arrho_{ ext{sep}}, H)}$$

• Linear (Local) Hamiltonians  $H_L = \sum_{i=1}^N H_i \otimes I_{\overline{i}}$  obey

$$s(H_L) = N.$$

Giovannetti, Lloyd, Maccone, PRL 2006; Pezzé, Smerzi, PRL 2009

### Several facts

$$s(H) = rac{\max_{arrho} F_Q(arrho, H)}{\max_{arrho_{ ext{sep}}} F_Q(arrho_{ ext{sep}}, H)}$$

• Linear (Local) Hamiltonians  $H_L = \sum_{i=1}^N H_i \otimes I_{\overline{i}}$  obey

$$s(H_L) = N.$$

Giovannetti, Lloyd, Maccone, PRL 2006; Pezzé, Smerzi, PRL 2009 Nonlinear (Nonlocal) Hamiltonians  $H_{NL} = H_L^k$  obey

$$s(H_{NL}) = \frac{\mathcal{O}(N^{2k})}{\mathcal{O}(N^{2k-1})} = \mathcal{O}(N).$$

Boixo, Flammia, Caves, Geremia, PRL 2007

# Our result 3: Useful Hamiltonians

For the quantity 
$$s(H) = \frac{\max_{\varrho} F_Q(\varrho, H)}{\max_{\varrho_{sep}} F_Q(\varrho_{sep}, H)}$$
, we find  
 $s(J_{\alpha}) > s(J_{\alpha}^3) > s(J_{\alpha}^2), \quad \forall N \ge 7,$   
 $s(J_{\alpha}^3) > s(J_{\alpha}) > s(J_{\alpha}^2), \quad 3 \le N \le 6.$ 

## Our result 3: Useful Hamiltonians

For the quantity 
$$s(H) = \frac{\max_{\varrho} F_Q(\varrho, H)}{\max_{\varrho_{sep}} F_Q(\varrho_{sep}, H)}$$
, we find  
 $s(J_{\alpha}) > s(J_{\alpha}^3) > s(J_{\alpha}^2), \quad \forall N \ge 7,$   
 $s(J_{\alpha}^3) > s(J_{\alpha}) > s(J_{\alpha}^2), \quad 3 \le N \le 6.$ 

#### Interpretations

J<sub>α</sub> is more metrologically useful than J<sup>2</sup><sub>α</sub> and J<sup>3</sup><sub>α</sub>, for large N.
 The hierarchy s(J<sup>k</sup><sub>α</sub>) > s(J<sup>k+1</sup><sub>α</sub>) does not exist.

### Our result 4: Entanglement classification

Consider: 
$$\rho_{\eta} = \eta |\Phi\rangle \langle \Phi| + \frac{1-\eta}{2^{N}}I$$
, for  $N = 6$ ,  
where  $|\Phi\rangle = \sqrt{\lambda_{1}} |0\rangle^{\otimes N} + \sqrt{\lambda_{2}} |1\rangle^{\otimes N} + \sqrt{1-\lambda_{1}-\lambda_{2}} |S_{N}\rangle$ .

Larger *N*, smaller red area!

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ □ のへぐ

# Conclusion

#### Summary

• We proved: 
$$s(J_{\alpha}) > s(J_{\alpha}^3) > s(J_{\alpha}^2)$$
.

• We showed: 
$$|\Phi\rangle = \frac{1}{\sqrt{2}} (|\mathsf{GHZ}\rangle + |S_N\rangle)$$
 is very useful.

#### **Open questions**

- Other computations of  $\max_{\varrho_{sep}} F_Q(\varrho_{sep}, H_{NL})$ ?
- ▶ More linear *H*, more useful? Is a positive *H* not very useful?

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

# Conclusion

#### Summary

- We proved:  $s(J_{\alpha}) > s(J_{\alpha}^3) > s(J_{\alpha}^2)$ .
- We showed:  $|\Phi\rangle = \frac{1}{\sqrt{2}} (|\mathsf{GHZ}\rangle + |S_N\rangle)$  is very useful.

#### **Open questions**

- Other computations of  $\max_{\varrho_{sep}} F_Q(\varrho_{sep}, H_{NL})$ ?
- ▶ More linear *H*, more useful? Is a positive *H* not very useful?
- Weak conjecture:  $s(J_{\alpha}^k) > s(J_{\alpha}^{k+2})$ , for large N?
- ▶ Strong conjecture:  $s(H_L^k) > s(H_L^{k+2})$ ,  $\forall H_L$  and large N?

#### Technical details about separability bounds

$$\mathcal{C}_{\rm sep}(J_{\alpha}^2) = \max_{\varrho_{\rm sep}} F_Q(\varrho_{\rm sep}, J_{\alpha}^2) = \dots = \max_{\vec{\alpha}} P(\vec{\alpha}),$$
  
where  $\vec{\alpha} = (\alpha_1, \dots, \alpha_N)^T$  with  $\alpha_i \in [-1, 1]$  and  
$$P(\vec{\alpha}) = \frac{1}{2} \Big[ N(N-1) + 2(N-2) \sum_{i \neq j} \alpha_i \alpha_j - \sum_{i \neq j} \alpha_i^2 \alpha_j^2 - 2 \sum_{i \neq j \neq k} \alpha_i^2 \alpha_j \alpha_k \Big].$$

Using the Lagrangian multiplier

$$\mathcal{L}(\vec{\alpha},\kappa_1,\kappa_2,\kappa_3) = P(\vec{\alpha}) + \sum_{m=1,2,3} \kappa_m \left( \sum_{i=1}^N \alpha_i^m - p_m \right),$$

we showed that the maximal  $P(\vec{\alpha})$  can be attained **only** by the symmetric case  $\vec{\alpha}_* = (\alpha_*, \dots, \alpha_*)$  with  $\alpha_* = \pm \sqrt{\frac{(N-2)}{(2N-3)}}$ .

 $\mathcal{O} \mathcal{O}$
